Facundo Posse

Technical Lead & Full-Stack Engineer

Munro, Buenos Aires, Argentina · facundopossee@gmail.com · facundoposse.com.ar · linkedin.com/in/facundopossee · github.com/facundopossee

SUMMARY

8+ years building production software and nearly 5 years as Technical Lead of up to 15 engineers across parallel teams in banking and healthcare. Player-coach: I work with Product Owners to turn business needs into scalable architecture, set quality standards through code reviews, testing and CI/CD, and grow engineers through pair programming and 1:1s. Since 2024 also building and running my own SaaS products end to end.

I use AI coding agents (Claude Code, Codex) every day at work and in my own products, set them up for teams, and design LLM agents and automations that remove manual work, with security and compliance in mind.

Core Competencies: Technical Leadership · Full-Stack Development · Mobile Development (iOS, React Native) · Cloud Architecture (AWS, Azure) · AI-Assisted Software Development · Test Automation (Playwright) · CI/CD & DevOps · Fintech & Healthtech · Regulated Industries · Remote Team Leadership

AI & AUTOMATION

- **Agentic software development:** Claude Code, Codex and other AI tools in everyday planning, implementation, refactoring, testing, code review, debugging and documentation across full-stack and mobile codebases.
- **Agent tooling & E2E automation:** configure coding agents for team use (instruction files, permission policies, pre-execution hooks) to enforce conventions and contain token cost, and integrate Playwright end-to-end test automation as a quality gate before releases.
- **LLM agents & automation:** design task-specific agents and reusable prompt templates (e.g. a marketplace search agent with structured filtering), plus browser automation and data pipelines that replace repetitive operational work such as personalized outreach at scale.

EXPERIENCE

Technical Lead — N5 Now *Dec 2021 – Present · Remote (contractor)*

- Lead and mentor up to 15 engineers across parallel teams of 2–10 (backend, frontend, database) through code reviews, pair programming and 1:1s, coordinating with QA, UX, security, architecture and release; evaluated 20+ candidates and hired ~10.
- Work with Product Owners to turn business needs into technical solutions for mobile banking and digital-health platforms, defining architecture directly or through architecture review.
- Brought AI coding agents into the team's workflow since 2024, shortening delivery times: shared configuration and conventions, AI-assisted implementation, reviews and debugging; built a 400+ test Playwright E2E suite as a release gate.
- Own AWS/Azure infrastructure, CI/CD and observability; validate and integrate releases across QA, staging and production.
- Run incident analysis across interdependent banking services and report root cause, risks and status to stakeholders.
- Prepare effort estimates and technical proposals for new and existing clients (~10 for prospective clients), including enterprise data-modernization bids.
- Delivered features for a mobile banking app with ~30K monthly active users, ~85K transactions and $230M+ in transfers per month: digital-wallet provisioning, real-time card data and rewards redemption.
- Implemented biometric authentication for login, password reset and account unlock, reducing support friction.

Independent Product Builder — Self-employed *2024 – Present · Remote*

- Design, build and operate 5+ SaaS products for small businesses: a multi-tenant ticketing platform where organizers have sold $50K+, plus order, stock and catalog management, loyalty programs and landing pages.
- Built a native iOS app in SwiftUI with HealthKit integration.
- Build and maintain production products as a one-person team.

Full Stack Developer — N5 Now *Feb 2021 – Dec 2021*

- Built healthcare platforms with .NET and React: scheduling, e-prescriptions, insurance integrations and billing.
- Developed insurance-integration APIs and optimized Azure pipelines and SQL workloads.

Full Stack Developer — Editorial ACES *Feb 2018 – Feb 2021*

- Built sales, e-commerce and internal productivity platforms with .NET and Vue.js.
- Integrated ERP (Dynamics AX) to automate inventory, production control and order management.
- Migrated APIs, frontends and databases to Azure; improved reliability of SQL-based data operations.

SKILLS

- **AI & automation:** Claude Code, Codex, agentic workflows, prompt engineering, browser automation
- **Backend & data:** Node.js, Python, .NET / ASP.NET Core, SQL, PostgreSQL, SQL Server, Supabase, REST APIs, microservices
- **Frontend & mobile:** React, Next.js, React Native, SwiftUI (HealthKit), Vue.js
- **Cloud & DevOps:** AWS, Azure, Vercel, CI/CD pipelines, Playwright E2E testing, observability, multi-tenant SaaS (auth, payments, messaging)
- **Leadership:** team leadership (up to 15 engineers), mentoring and 1:1s, hiring and candidate evaluation, technical roadmaps, Product Owner collaboration, secure development in regulated industries

EDUCATION, CERTIFICATIONS & LANGUAGES

- **B.Sc. in Information Systems** — Universidad Adventista del Plata, Argentina (2018)
- **Certifications:** Microservices Development · ASP.NET Core · Information Security · Leadership & Team Management · Vue.js
- **Languages:** Spanish (native) · English (working proficiency — technical documentation and written communication)
